## Considerations for your Home or Cabin

- Where will you locate the house on the site? Where will the sunrise and set? What direction will face the street? How will you access the site?
- Do you prefer one story or two? Will there be any exposure on the basement/lower level?
- How do you want room layouts to be done? Consider traffic flow through the house.
- How many bedrooms?
- How many bathrooms do you want and what size?
- What is the size of your family? How many people will occupy the house at one time?
- Should there be space consideration for pets?
- What should the size of the kitchen area be? Should it accommodate a table? What seating space will be available? What size should the pantry be for food storage?
- Will you have a washer and dryer?
- Will you have a fireplace or woodstove?
- Consider the size of the living room. How much furniture will you have?
- Do you want any decks, patios, or porches? If so, how large?
- How much garage space will you need? How do you plan on using your garage? What toys do you need to keep protected?
